# GOTA HUB

WATER HARVESTING

GotaHub facilitates the collection of hotel waste-water for use in community gardens, through our product service system.

By engaging hotel guests to learn about Catalonia's drought and save shower-water with the GotaKit, we create a link between hotels and community gardens around the city to provide water for irrigation.

## SERVICE MAP

### To foster symbiotic connections within local communities

GotaHub provides a paid service of kit production coordination, connection, data reporting and custom design to hotels.
